Score: 23 of 25

## 92% Correct:

## Question 1:

What is a correct syntax to output "Hello World" in Java?

✔ System.out.println("Hello World");                                          Your answer

  echo("Hello World");

  Console.WriteLine("Hello World");

  print ("Hello World");

## Question 2:

Java is short for "JavaScript".

✔ False                                                                        Your answer

  True

## Question 3:

How do you insert COMMENTS in Java code?

Get Certified

CSS    JAVASCRIPT    SQL    PYTHON    JAVA    PHP    HOW TO    W3.CSS    C

/* This is a comment

## Question 4:

Which data type is used to create a variable that should store text?

✔ **String**                                    Your answer

Txt

myString

string

## Question 5:

How do you create a variable with the numeric value 5?

✔ **int x = 5;**                                Your answer

x = 5;

num x = 5

float x = 5;

## Question 6:

How do you create a variable with the floating number 2.8?

✔ **float x = 2.8f;**                           Your answer

byte x = 2.8f

## Question 7:

Which method can be used to find the length of a string?

✔ length()                                Your answer

len()

getLength()

getSize()

## Question 8:

Which operator is used to add together two values?

✔ The + sign                              Your answer

The * sign

The & sign

## Question 9:

upperCase()

touppercase()

---

# Question 11:

Which operator can be used to compare two values?

✔ ==                                    Your answer

    < >

    =

    > <

---

# Question 12:

To declare an array in Java, define the variable type with:
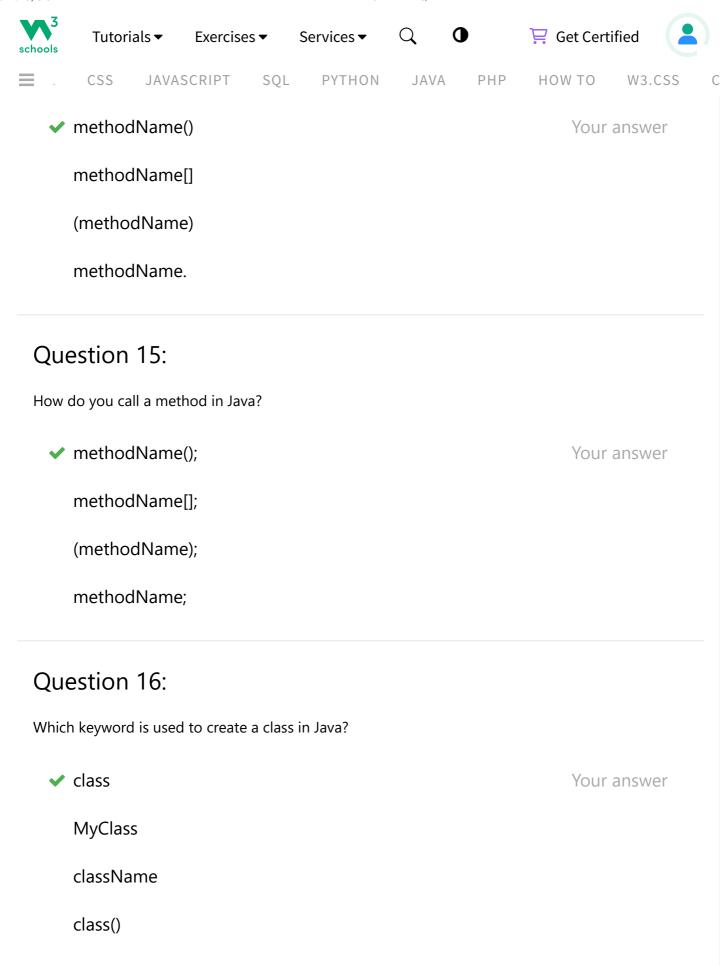

✔ []                                    Your answer

    {}

    ()

---

# Question 13:

Array indexes start with:

✔ 0                                    Your answer

    1

✔ methodName()                                                  Your answer

methodName[]

(methodName)

methodName.

# Question 15:

How do you call a method in Java?

✔ methodName();                                                 Your answer

methodName[];

(methodName);

methodName;

# Question 16:

Which keyword is used to create a class in Java?

✔ class                                                         Your answer

MyClass

className

class()

# Question 17:

new myObj = MyClass();

class myObj = new MyClass();

class MyClass = new myObj();

---

# Question 18:

In Java, it is possible to inherit attributes and methods from one class to another.

✔ True                                                        Your answer

False

---

# Question 19:

Which method can be used to find the highest value of x and y?

✖ Math.largest(x,y)                                           Your answer

Math.maxNum(x,y)

Math.maximum(x,y)

Math.max(x,y)                                                 Correct answer

---

# Question 20:

Which operator is used to multiply numbers?

✔ *                                                           Your answer

x

# Question 21:

Which keyword is used to import a package from the Java API library?

✔ **import**                                          Your answer

   lib

   getlib

   package

# Question 22:

How do you start writing an if statement in Java?

✔ **if (x > y)**                                          Your answer

   if x > y then:

   if x > y:

# Question 23:

How do you start writing a while loop in Java?

✖ **while x > y {**                                          Your answer
   while x > y:

   x > y while {

   while (x > y)                                          Correct answer

✔ return                                                          Your answer

break

void

get

## Question 25:

Which statement is used to stop a loop?

✔ break                                                          Your answer

stop

exit

return
